

**VELUX®**

# Solar Hot Water Special **\$4,999** after incentives

*This great price along with the incentive programs and the new Maine PACE loan program means now is the time to cut your energy costs and environmental impact by switching to free solar hot*

You get a complete Velux solar hot water system sized for a family of two including:

- One full size U12 collector with racking and solar pump station/controller
- 60 gl. Hot water storage tank with boiler backup
- All parts and installation

### ***This system is designed to meet 70% of your annual domestic hot water needs***

Switching to solar hot water can help protect your budget as fuel prices rise. With solar hot water your boiler will no longer fire during non-heating season just to meet your normal domestic hot water needs.

Payback time is often just 6-7 years, or less if you have a family, after that the sun's free energy continues to provide hot water at no cost.

Solar hot water needs no annual maintenance, it works with all existing systems, and it creates zero environmental impact. With a 10 year limited warranty and expected life of 25 years that is a lot of free hot water. Larger size systems and different tank options are available at similar savings.

|------------------------|-------------------|
| Installed System       | \$ 8,571          |
| Maine rebate           | -1,000            |
| Federal 30% tax credit | <del>-2,572</del> |
| <b>Net Cost</b>        | <b>\$4,999</b>    |

### ***Need help with the costs?***

Many banks now offer "energy loans".

PACE is Maine's new finance program that can provide loans up to \$15,000 for energy upgrades. You need enough equity to cover the loan, debit ratio of 45%, credit score is no impact.

[www.EfficiencyMaine.com/PACE](http://www.EfficiencyMaine.com/PACE)

Promotional price includes rack mount installation on sunny south facing asphalt roof, no more than 2 stories with good access, 60ft of stainless steel lineset piping, and reusing your existing tank circulator/pumps. Within 30 minutes of Portland there is no travel charge. Buyer is responsible for any permit associated costs. Price assumes there is an electric outlet for pump. The tank is designed for a boiler backup but other tanks can be quoted. Solaris will do a free pre-purchase site survey and answer all your questions. We have final determination regarding site suitability and installation cost/price. This offer must be installed by 8/31/12. We strive to stay up to date on incentive programs but have no control over them. Not valid with coupons, discounts, or referral bonus program.
